BASIC GYM - USER GUIDE

Run the gym from one workspace

A practical guide to member records, memberships, payments, stock, reporting, staff access, and safe offline work.

- A new owner or receptionist can use this guide alongside the in-app guided tour.
- Use the sidebar to move between the 11 management areas; use Ctrl/Command + K for global search.
- Record operational changes in the app and confirm the saved result on the relevant page.

READ BEFORE YOU START
Set up Template Data and Reset all data replace live business records. Do not use either control in a gym workspace that contains real member or financial data.

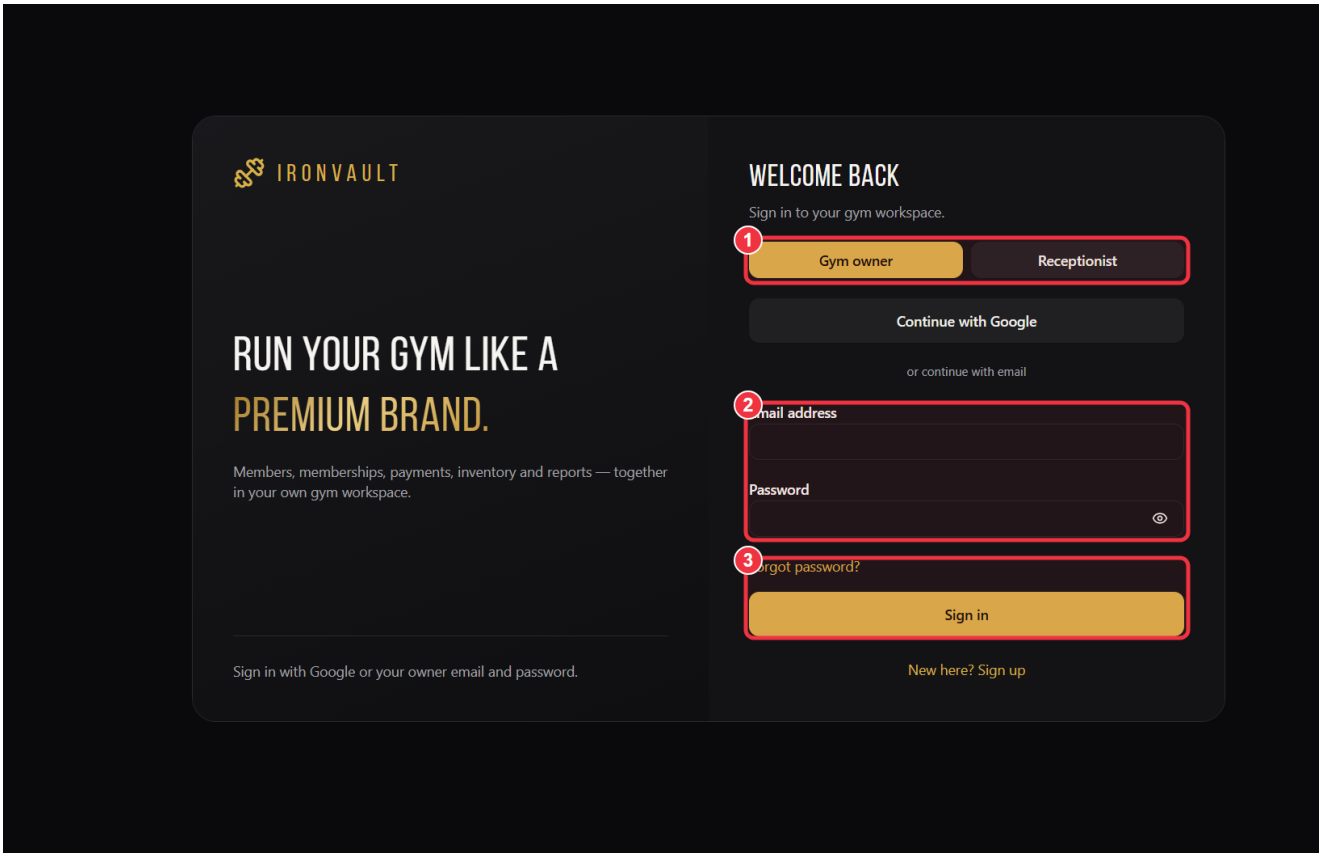

Quick route map

Dashboard - Members - Memberships - Payments - Products - Expenses - Reports - Inquiries - Notifications - Trash - Settings

Visual examples are redacted and use illustrative workspace data. Totals, names, dates, and labels can differ in your gym.

1 - Sign in and choose your role

The gym workspace has separate owner and receptionist sign-in modes. Staff only see pages and actions granted by the owner.

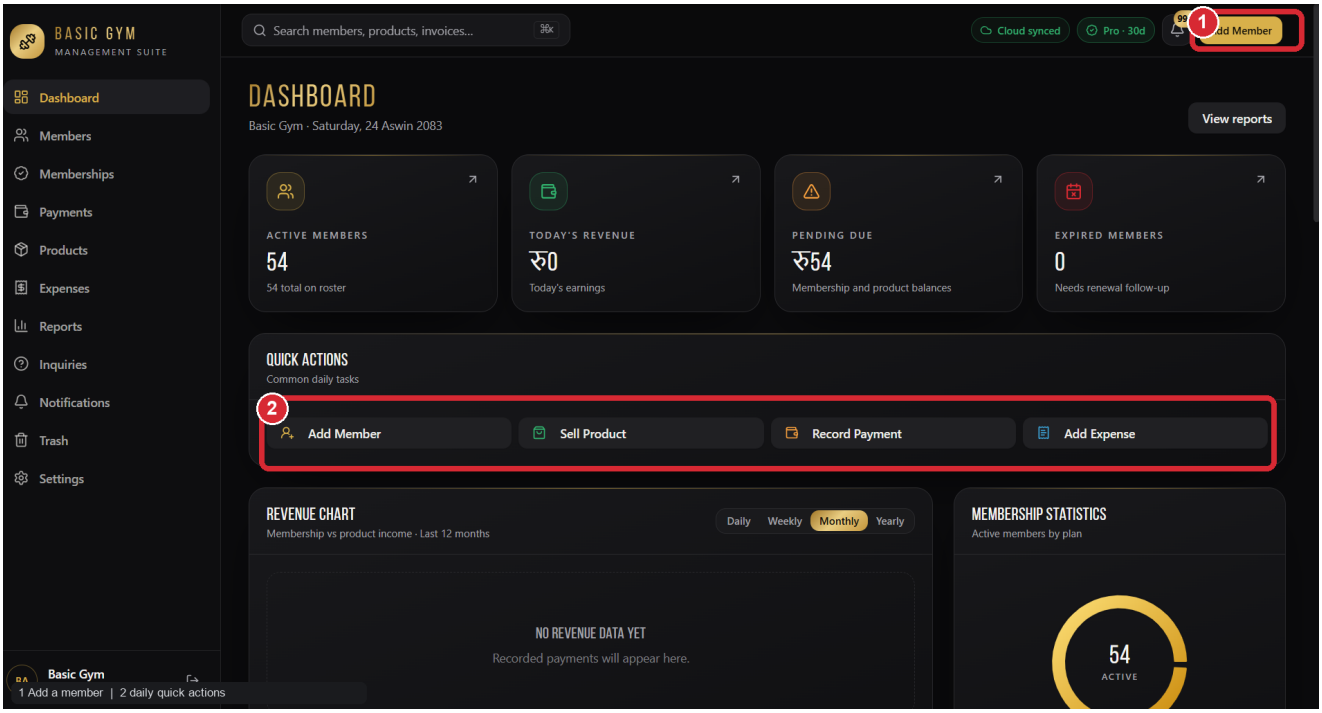

Red callouts: (1) choose the correct role, (2) enter the account credentials, (3) use recovery or sign in.

1. Open the gym sign-in page. Choose Gym owner or Receptionist before entering the matching credentials.
2. Sign in with email/password or Google if enabled for the workspace. Use Forgot password for account recovery.
3. If you are a receptionist and a page is missing, ask the owner to review Settings > Staff Access; do not use the owner login.

IMPORTANT
Never share passwords or reuse a staff password. The owner controls staff access and permissions.

2 - Dashboard and daily actions

Use the dashboard as a daily overview. Its cards and charts are summaries; open the source page to investigate or change a record.

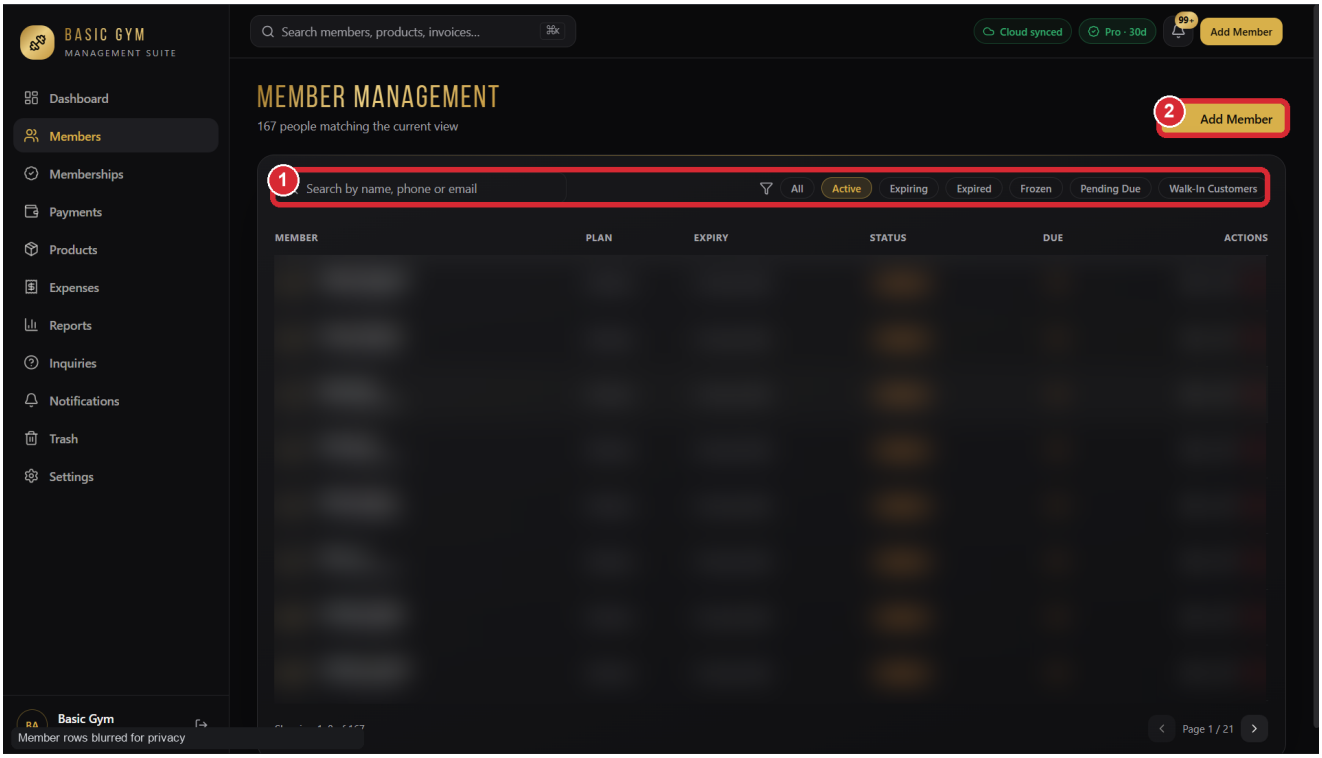

Red callouts show Add Member and the four common daily shortcuts. Example counts are not live promises.

1. Review active members, today's revenue, pending dues, and expired members.
2. Use Quick Actions to add a member, sell a product, record a payment, or add an expense.
3. Choose Daily, Weekly, Monthly, or Yearly chart ranges; open Reports for the detailed period views.
4. Check the cloud status in the top bar. 'Sync pending - retry' means changes still need confirmation by the server.

IMPORTANT
The notification bell badge may cap its display at 99+; open Notifications for the actual unread count.

3 - Member roster and member profiles

Members is the searchable roster. A profile is the place to review a person's contact details, membership terms, due amount, and history.

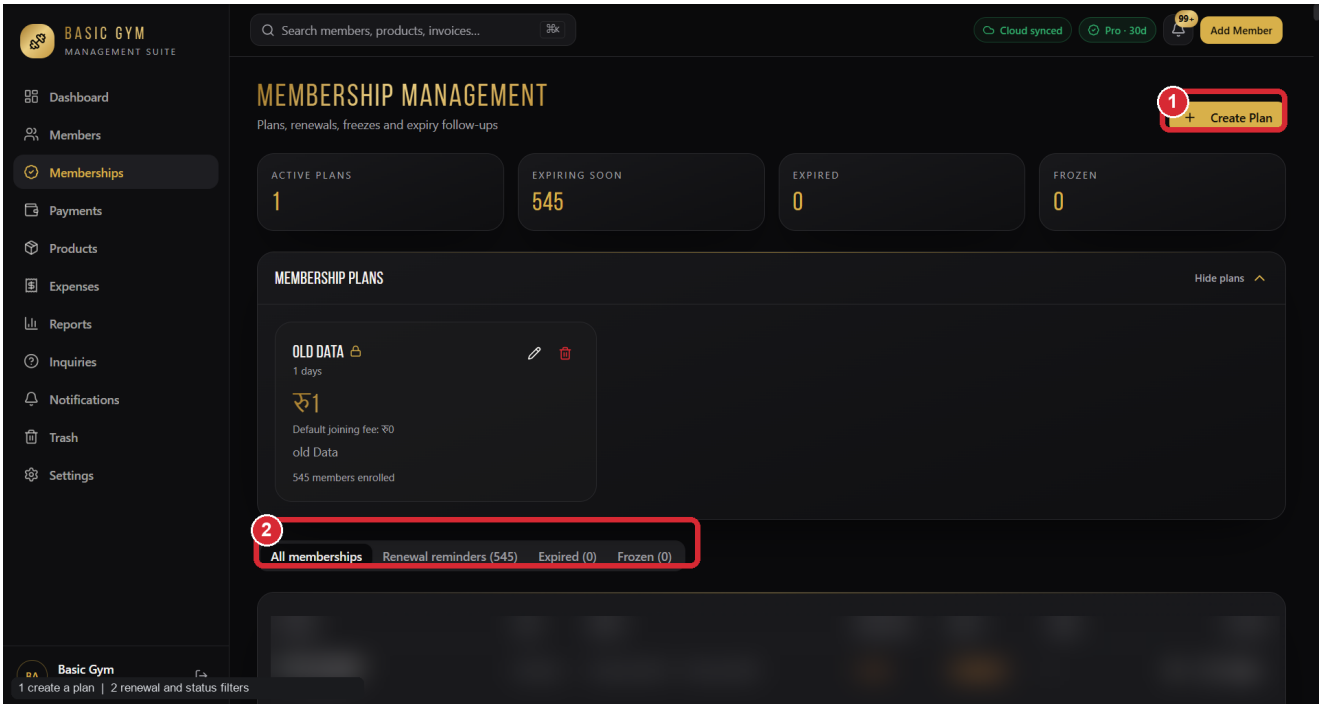

Member rows are intentionally blurred. Red callouts point to search/status filters and Add Member.

1. Use the search box for name, phone, or email, then choose a status filter such as Active, Expiring, Expired, Frozen, Pending Due, or Walk-In Customers.
2. Select Add Member and complete the profile. If adding a plan now, finish the membership step and confirm its dates and price before saving.
3. Open the eye action to view a profile, the pencil to edit, and the trash action to move a record into recoverable Trash.
4. Use the page controls to continue through a long roster; searches and filters update the matching count.

IMPORTANT
Check for a likely duplicate before adding a person. A profile without a saved membership term is not the same as an expired membership.

4 - Plans, renewals, freezes, and expiry

A plan defines price and duration. A membership term assigns a plan to a member over real start and end dates.

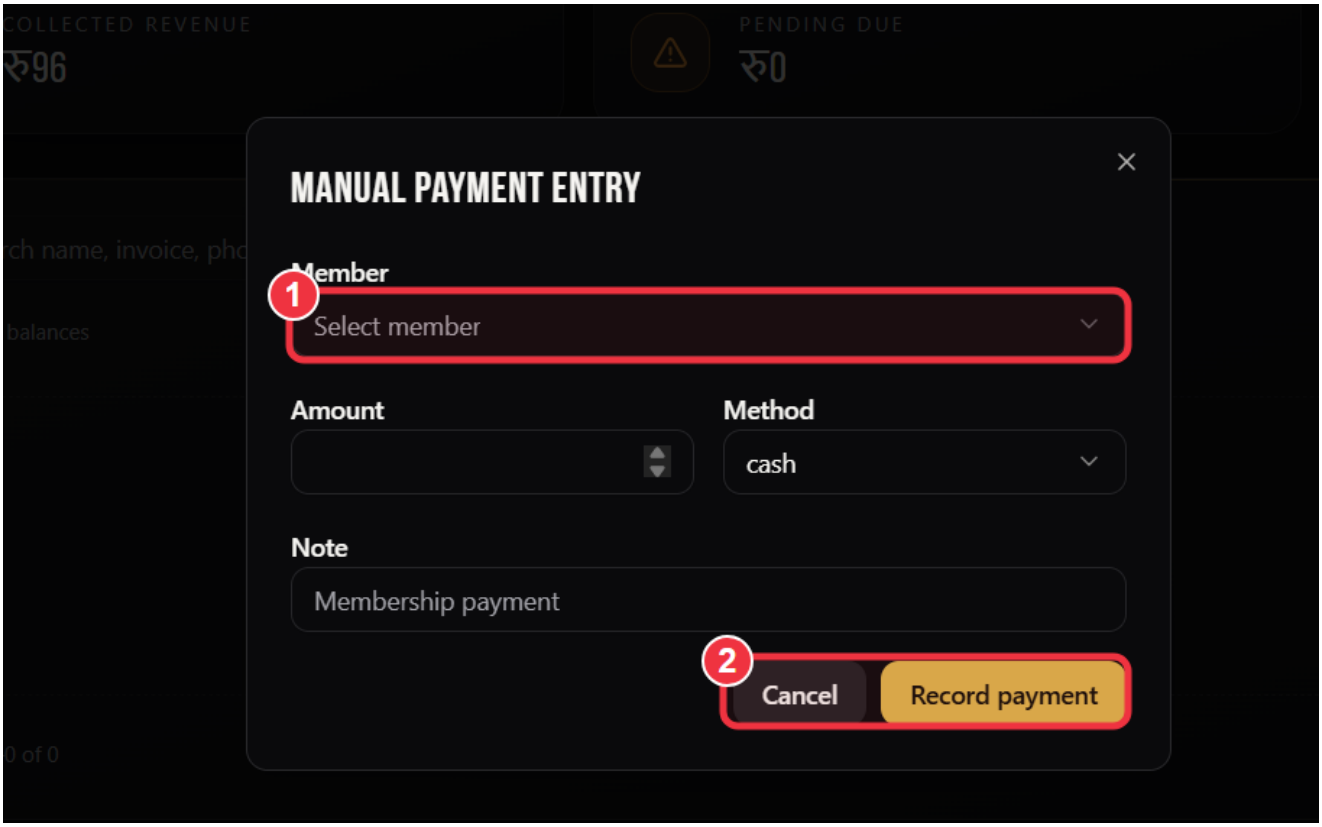

Red callouts show Create Plan and membership status filters; member rows are blurred.

1. Create or edit plans in Memberships. Set the name, duration, price, and any joining fee deliberately.
2. Use All memberships to inspect terms, Renewal reminders to follow up soon, Expired for ended terms, and Frozen for paused terms.
3. Assign plan starts a term for a member without one; Renew adds a new term to an existing member. Confirm dates, plan, and amount first.
4. Freeze/Unfreeze applies to a saved membership term. If a profile shows No membership term recorded, assign the correct plan only when the member should begin or renew.

IMPORTANT
Do not freeze a profile that has no membership term. The app cannot preserve or pause dates that were never recorded.

5 - Payments, balances, and receipts

Payments are manual records; no card gateway is connected by this screen. Use it to record money actually received and to review balances.

Red callouts: (1) select a member or walk-in customer, (2) record only after checking the amount and method.

1. Choose Manual Payment. Select a gym member for a member payment, or choose Walk-in / non-member customer and enter the customer details for a non-member payment.
2. Enter the amount, method, and a clear note, then select Record payment. Confirm the payment appears in Payment History before handing over a receipt.
3. Use Pending Payments to review balances and Payment History to find recorded transactions. Search by customer, phone, email, or invoice.
4. Open an invoice/receipt from the saved payment. Export the filtered records to CSV when needed.

IMPORTANT
A walk-in customer payment does not create a gym member or membership. Never record a payment solely because a toast appeared - verify the saved row.

6 - Products, inventory, and sales

Products tracks the catalogue, stock, product sales, and margin. The sale form validates quantity against current stock.

1. Create a product with its selling price, cost, current stock, and low-stock threshold. Review both price and cost before saving.
2. Use Sell Product, choose a product and whole-number quantity within stock, then review any percentage or fixed discount.
3. Choose a gym member or Walk-in customer as the buyer. Add customer details only when needed for the sale record.
4. Check stock and sale history after saving. The app blocks quantities above available stock; low-stock warnings help plan restocking.

IMPORTANT
Discounts reduce the sale total and can affect profit. Verify the final amount and buyer before confirming a sale.

7 - Expenses and finance

Expenses records operating costs, categories, receipts, and profit context. Attachments are private workspace files.

1. Choose Add Expense, provide a clear title, date, category, and non-negative amount, and optionally attach a receipt image or PDF.
2. Use the page's date range and category summaries to review spending. Edit a record if it needs correction.
3. Some expenses can be locked against deletion. Open the expense, unlock it, save, and then move it to Trash if removal is genuinely required.
4. Use the reports and dashboard together: revenue is not the same as net profit; expenses and product cost affect the result.

IMPORTANT
Do not upload an unrelated customer document as an expense receipt. Keep receipts limited to the business transaction.

8 - Reports and exports

Reports provide period-based business summaries for owners and appropriately authorized staff.

1. Choose the period or date range first and confirm the displayed totals match that range.
2. Review income, dues, expenses, product activity, and other available charts or summary tables.
3. Use CSV export for analysis in a spreadsheet. Treat exports as sensitive copies of gym business data and store them securely.

IMPORTANT
The CEO platform overview is not the source for a gym's member-level reports. Open the Gym Management Application for gym operations.

9 - Inquiries and follow-up

Inquiries is the lead tracker for prospective members who have not yet joined.

1. Add a prospect with the available contact details and their membership interest.
2. Update the inquiry status and follow-up details after each conversation so staff can see the next step.
3. When the person joins, create their member profile separately and verify any membership term; an inquiry is not a member record.

IMPORTANT
Avoid entering health or identity information that is not needed for gym follow-up.

10 - Notifications and the unread count

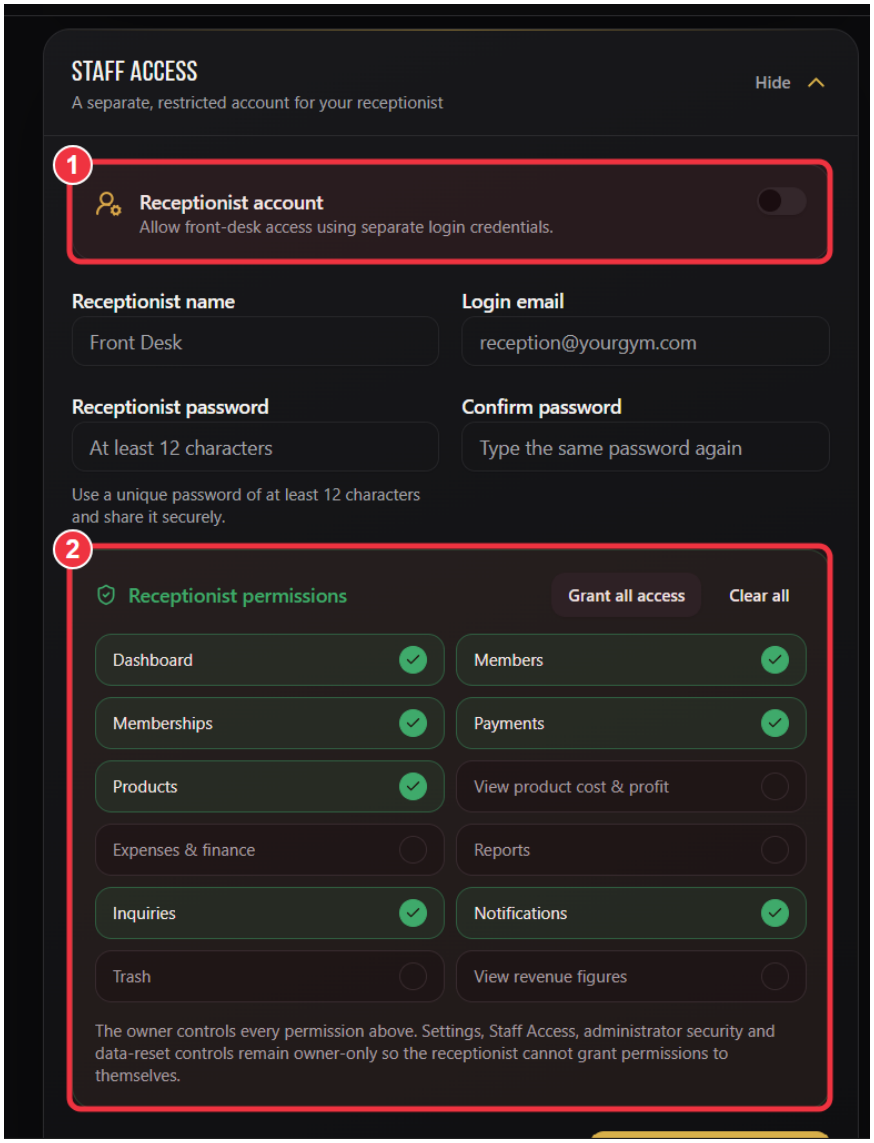

Notifications groups payment-due reminders, membership expiry, and other workspace alerts.

1. Open the bell for recent alerts or the Notifications page for the full list.
2. Use Mark all read to mark visible generated notifications as read. This does not delete members or payments.
3. The header badge is abbreviated at 99+; the Notifications page shows the actual unread total.
4. Open the linked member or record to resolve the underlying issue; marking an alert read does not pay a balance or renew a membership.

IMPORTANT
If an unread count looks stale, refresh the notification list and verify the record status; do not use Reset all data to clear notifications.

11 - Trash, settings, and staff access

Trash provides recovery for supported deleted records. Settings controls workspace identity, billing context, backups, staff access, and danger-zone actions.

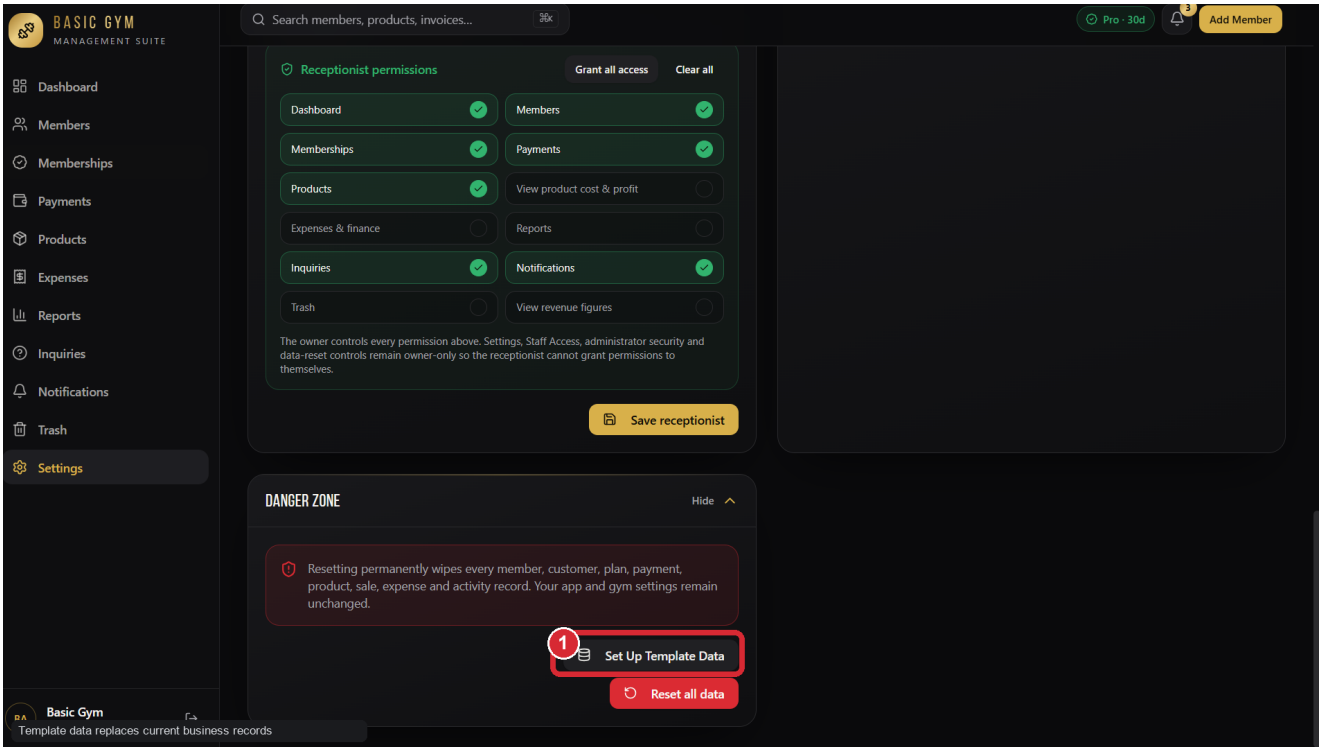

Red callouts: (1) enable the separate receptionist account, (2) choose the least access needed and save.

1. Restore an item from Trash when it was removed by mistake; items may be permanently removed after the recovery period.
2. In Settings, update gym and invoice details, receipt presentation, reminders, and account security as needed.
3. To enable receptionist access, set a separate login email and strong password, choose only the required permissions, and Save receptionist.
4. The owner retains access to Settings, staff control, security, and data-reset controls; receptionist permissions cannot grant themselves more access.

IMPORTANT
Use a unique password of at least 12 characters and share it securely. Turn off unused permissions.

12 - Backups, template data, and offline sync

The app can preserve a device copy for offline use and synchronize changes when online. Workspace reset actions require special care.

The red callout shows Set Up Template Data in the Danger Zone.

1. Before using the app offline, sign in online on that same device so the account's workspace can be cached.
2. When offline, changes are saved locally and queued for sync. On reconnect, watch the cloud status until it confirms Cloud synced.
3. If the status says Sync pending - retry, use the retry control and verify the changed record on the server before closing or clearing site data.
4. Use Settings > Backup & Restore to export a JSON backup and keep it in a protected location; check the gym identity before restoring.

IMPORTANT
Set Up Template Data replaces business records with starter data; Reset all data deletes business records. Neither is a safe way to fix a single missing item.

Quick troubleshooting

When a number or record looks wrong, trace it back to the source list before changing data.

- Dashboard expiry total differs from Memberships: check for profiles with no saved membership term; they are not the same as expired terms.

- Cloud sync keeps retrying: confirm the device is online, retry, then verify the exact record in the workspace before signing out.

- A receptionist cannot open a page: ask the owner to grant only the needed permission and save the staff account.

- A walk-in payment is missing: use Manual Payment and choose Walk-in / non-member customer; this does not create a member.

SCOPE
This guide describes current app workflows from the repository and available redacted screenshots. Live behavior, data totals, and some labels may vary by workspace and permissions.
